Probable Link C8 Cancer 16April2012.pdf

FYI, Gloria from NJDEP had provided the references from C8 panel. Based on your earlier email, we will take out all the information from the fact sheet that was obtained from these documents.

Thanks,

Subject: PFOA Review paper and Cancer Probable Link Report

Mary,

Attached is a review article: "Perfluorooctanoic acid (PFOA), an emerging drinking water contaminant: A critical review of recent literature" by Gloria Post (NJDEP Office of Science), Perry Cohn (NJ Dept. of Health and Senior Services), and Keith Cooper (Rutgers Univ.) that was recently published online in Environmental Research.

Also attached, FYI, is a C8 Science Panel report that was released after the Post et al. review was finalized and therefore was not included in the review. The C8 Science Panel panel is conducting epidemiology studies on about 70,000 people with chronic drinking water exposure to PFOA in W. Virginia/Ohio. They concluded that there is a probable link between PFOA and both testicular and kidney cancer. Several peer reviewed publications are cited as "in press" in the report and will hopefully be available in the near future. As you know, it is rare to have evidence of an association between exposure to a drinking water contaminant and cancer in humans. Reports and peer-reviewed publications on the association of PFOA with a number of other health endpoints are found on the C8 Science Panel Website at <http://www.c8sciencepanel.org/>

Please feel free to contact me if you have any questions or need further information.

Thank you!
Gloria
